

IDScan.net

# Age-Restricted Vending

Instantly verify age and identity to dispense cannabis, tobacco, or alcohol in publicly accessible environments.

## Customers simply:

- 1 Insert their ID into the scanner which captures dual-sided images in high resolution while simultaneously reading the information from the barcode to verify age.
- 2 Use the on-unit camera to compare the video of the customer to the image on the ID to ensure the purchaser is the rightful owner of the document while simultaneously running an anti-spoofing and liveness detection process.

This process takes less than **30 seconds** total to complete and is the only way to ensure that age and identity are verified.

## Benefits:

- ✓ No need for an attendant
- ✓ Control inventory
- ✓ Ensure compliance with all applicable laws and regulations

# Vendors can select:

What happens with their customers' personally identifiable information (PII), depending on local data privacy and product industry regulations	1. Only pass/fail results are received, no transmission of PII
	2. Pass/fail results + log of parsed data from ID
Minimum age for purchase	18, 21, etc.

## How it works:
