Catch up to 95% of fake IDs with VeriScan Authentication		✓	✓	✓	
UV, IR, white light scanning + checks against hologram and watermark libraries		✓	✓	✓	

Catching The Most Fake IDs

All of the IDScan.net scanner solutions are equipped with best-in-class 2D barcode validation, which will catch suspicious and fraudulent IDs that contain anomalies in their 2D barcode.

In order to perform true document authentication, you will need to pair VeriScan with an authentication device: the **Thales CR5400**, **E-Seek M500**, or **Thales AT9000**.

These devices contain specialty cameras, white/infrared/UV light, and can match documents against hologram and watermark libraries. Using one of these devices your dispensary can reliably catch 95% of fake IDs.

Passport Scanning

If your customers regularly use passports (US or International) as identification, you will need to select either the **Thales AT9K**, or the **Panasonic FZ-N1**. Both of these devices are capable of reading and parsing passport MRZs on all global passports and passport ID cards, in addition to US driver's licenses and other government issued IDs.

Mobile Scanning

If you are looking for an ID scanner to help with line busting, for cannabis delivery, or simply prefer a handheld option, you will select the **Panasonic FZ-N1**.

This device is extremely durable, reliable, and includes up to 8 hours of battery life.

It works without internet connectivity and in low light environments with an auto-focus laser barcode scanner.

Hardware Free ID Scanning

Your dispensary also has the option to use the **VeriScan** application to scan IDs using an iPad, Android, or iPhone. Simply visit the AppStore and download and install the **VeriScan Online** mobile app, and follow the sync instructions in the Dutchie knowledgebase. However, iPads are only capable of performing basic 2D barcode validation, and do not include auto-focus or laser scanning.

FAQ

How much does the hardware cost?

The price of ID scanners is variable depending on the scanner's capabilities. IDScan.net offers the most affordable prices on best-in-class scanning products. We sell only the most durable, reliable devices to Dutchie customers.

Does the hardware need to be hooked up to a computer?

All desktop scanners require a Windows computer to perform ID scanning, validation, and authentication. Android and iOS mobile scanning devices do not.

When will I get my hardware?

Orders by 2PM ship same-day. We offer free ground shipping to the continental US. You can purchase expedited shipping to receive your scanners even sooner.

How do I set up my scanner?

The Dutchie knowledgebase contains detailed walkthroughs on setting up your scanner.

I'm not sure which scanner I need!

The IDScan.net Cannabis Team is happy to help you select the right device.

You can contact their team at **504.434.0222** or **marley@idscan.net** for personalized assistance.
