

1

Navigate To Our Driver Library

Visit the IDScan.net website using the QR code, or by typing idscan.net/id-scanning-hardware-driver-downloads into your search bar.

2

Download E-Seek M280 Drivers

Scroll down until you see the E-Seek M280 device. You will need to download both the Driver and Image Driver.

3

Extract the Driver Files

Navigate to your downloads folder, and right click the .zip file named **M280v2_Driver** and select “Extract All.”

4

Install Both Drivers

Run the setup file named **CDM21228_Setup.exe**.

Then open your Device Manager and look for **Other Devices > M280V2**.

Right click on the **M280V2** and select “Update Driver.” Select “Browse my computer for driver software”.

5

Select Your Operating System

Return to the location where you previously extracted your .zip folder and select your OS from the list.

6

Start Your Software

You should be prompted to use the M280 the first time you launch **VeriScan** or **WizzForms** after installation.

If not, ensure the scanner is selected in the software.

Please contact our technical support team with any additional questions:

About Your E-Seek M280

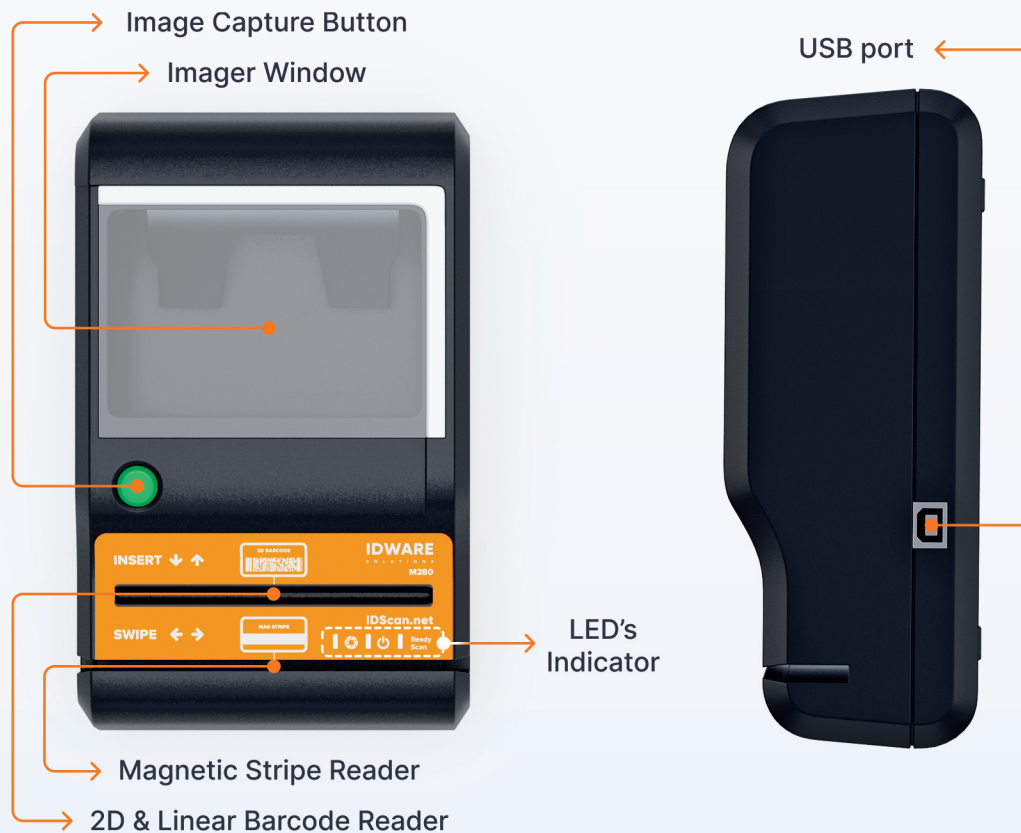

Image Capture

You can utilize the M280 for image capture from an ID, as well as for capturing and storing additional images such as copies of receipts - great for preventing chargeback fraud.

1. Scan the barcode on
2. Place the ID image-side down on the flatbed and press the green button to capture a photo of the ID.
3. Capture additional images (receipts, insurance cards, etc.) by placing them on the flatbed and pressing the green button.
4. All pictures will be stored with the Visitor Record associated with the last ID that was scanned.
