

Selecting the Right ID Scanner for Your Dispensary

Treez age verification partner **IDScan.net** provides a variety of ID scanner options to meet the needs of dispensaries and cannabis delivery businesses. All hardware integrates natively with **Treez POS**, parses ID information with 100% accuracy, and performs 2D barcode validation. **VeriScan** is also capable of sending ID images, or a cropped ID photo, into the **Treez POS**, so you can easily match customer faces to their visit or purchase history.

Catch up to 95% of fake IDs with VeriScan Authentication		✓	✓	
UV, IR, white light scanning + checks against hologram and watermark libraries		✓	✓	

Catching The Most Fake IDs

All of the IDScan.net scanner solutions are equipped with best-in-class 2D barcode validation, which will catch suspicious and fraudulent IDs that contain anomalies in their 2D barcode.

In order to perform true document authentication, you will need to pair **VeriScan** with an authentication device: the **Thales CR5400** or **Thales AT10K**.

These devices contain specialty cameras, white/infrared/UV light, and can match documents against hologram and watermark libraries. Using one of these devices your dispensary can reliably **catch 95% of fake IDs**.

Passport Scanning

If your customers regularly use passports (US or International) as identification, you will need to select the **Thales AT10K**, **Unitech PA768** or the **Unitech TS200**. These devices are capable of reading and parsing passport MRZs on all global passports and passport ID cards, in addition to US driver's licenses and other government issued IDs.

Mobile Scanning

If you are looking for an ID scanner to help with line busting, for cannabis delivery, or simply prefer a handheld option, you will select the **Unitech PA768**.

This device is extremely durable, reliable, and includes up to 8 hours of battery life.

It works without internet connectivity and in low light environments with an auto-focus laser barcode scanner.

Hardware Free ID Scanning

Your dispensary also has the option to use the **VeriScan** application to scan IDs using an iPad, Android, or iPhone. Simply visit the AppStore and download and install the **VeriScan** mobile app, and follow the sync instructions in the **Treze knowledgebase**.

However, iPads are only capable of performing basic 2D barcode validation, and do not include auto-focus or laser scanning.

FAQ

How much does the hardware cost?

The price of ID scanners is variable depending on the scanner's capabilities. IDScan.net offers the most affordable prices on best-in-class scanning products. We sell only the most durable, reliable devices to Treez customers.

Does the hardware need to be hooked up to a computer?

All desktop scanners require a Windows computer to perform ID scanning, validation, and authentication. Android and iOS mobile scanning devices do not.

Which version of VeriScan do I need?

In order to connect your ID scanner to **Treez POS** you will need to purchase **VeriScan Enterprise** or **VeriScan ID Authentication**. Both subscriptions can be selected in the **VeriScan Cloud Portal** and are available as monthly or annual subscriptions.

How do I set up my scanner?

The **Treez knowledgebase** contains detailed walkthroughs on setting up your scanner.

I'm not sure which scanner I need!

The **IDScan.net Cannabis Team** is happy to help you select the right device. You can contact their team at **504.434.0222** or **ndyani@idscan.net** for personalized assistance.
